

Loft Insulation

What is it?

Loft insulation is commonly a mineral wool that is laid in between and on top of the ceiling joists to reduce heat loss through the roof. Loft insulation is a very cost effective way to reduce your heating bills and can be installed relatively cheaply (gloves and mask should be worn).

How does it work?

Loft insulation traps small pockets of air which reduces heat loss through the ceiling (heat finds it difficult to transfer across air). Loft insulation can be installed yourself or you can get it installed at a discounted rate. It's free for those over 70 or on certain benefits and for those not fulfilling either criteria, prices start from £99.

What's the benefit?

25% of heat lost by a home goes through the roof. Loft insulation helps your house stay warmer for longer (requiring less heating) during the winter, and cooler during the summer. This therefore means that you don't need to use as much gas or electricity (in heating and cooling) which is better for your pocket and the environment.

At a glance

Annual Savings

Around £50-100

Around 250kg CO₂

Costs from £99 (including a grant, or free for some)

Loft insulation is subsidised by the utility companies (£99 includes this grant)

If you need a reputable company to provide you with a no-obligation quote, please contact Actio₂n Surrey on 0800 783 2503

Oak Tree House Experience

At Oak Tree House we have insulated the loft with 300mm of mineral wool. This has enabled us to improve the thermal performance of the roof considerably. **Don't lose your loft space! You can now get insulated loft boards to go across the existing loft joists.**

To have a tour of Oak Tree House, please book online using the link under the virtual house or call 0800 783 2503.
